Education

Singapore University of Technology and Design — Singapore
BEng. Computer Science *GPA: 4.59* — 2024 - 2028

School of InfoComm Technology - Ngee Ann Polytechnic — Singapore
Diploma in Information Technology *GPA: 3.73* — 2019 - 2022

School of Science and Technology, Singapore — Singapore
O-Levels — 2015 - 2018

Work Experience

Sign Pte Ltd — Singapore
Software Engineer Intern — March 2021 - August 2021

- Learnt how to work with Linux environments as all work machines ran Ubuntu, e.g. installing packages, essential CLI commands, Vim, etc.
- Gathered and clarified requirements from superiors to ensure that features implemented met the user and business needs.
- On the frontend, implemented user-friendly UI, ensuring adequate margins/padding, responsive layouts, as well as a design consistent with the rest of the application. Also implemented new UX features such as Loading Skeletons to improve user retention. Additionally, the frontend was built with Elm, a functional programming language, which taught me about functional programming paradigms like recursion and higher order functions.
- On the backend, wrote or updated RESTful API endpoints using Express with Typescript to complement the frontend features. Also had to write and run the respective passing and failing unit tests to ensure proper API functionality before deployment.
- Went through strict code review sessions with my supervisors to ensure clean and maintainable code before code was deployed. Learnt a lot about the practical application of clean code practices, such as SOLID, YAGNI, KISS, etc.

Academic Projects

ROOT Student Government — root.sutd.edu.sg
Secretary of ROOTech — Mar 2026 - Present

- Currently, leading a team of 10 ROOTies to maintain and add features to the ROOT website using Next.js and Supabase.
- Liaise with key stakeholders like the ROOT Cabinet or School Offices to gather user/business requirements. Then, plan and assign tasks to ROOTies, assist with any blockages during their development process, and lastly, review and merge their code into production.
- Review current workflows and research new tools or methods that can improve our Developer Experience or reduce costs, e.g. migrating env vars to SOPS, moving backend from DigitalOcean to Supabase, etc.
- Wrote new documentation and cleaned up old documentation to facilitate the onboarding process for ROOTies.

Personal Projects

CIS Youth Hymnal *Hugo, HTML, CSS, Javascript* — github.com/church-sg/cis-youth-hymnal-v2
A PWA for church members to refer to hymn lyrics. Built using Hugo SSG for fast, static page loads, along with Service Workers to add offline capability. Also wrote a Bash script for 1-click deployment onto Github Pages.

Dotfiles — https://github.com/notyumin/dotfiles/
All my different config files, for Neovim, Tmux, Wezterm and more. Managed by GNU Stow.

Additional Information

Front-end Development:	HTML, CSS, Javascript, Elm, Next.js, React, ASP.NET
Back-end Development:	Typescript, Node.js, Golang, SQL
Sys Admin:	Linux, Bash, Git, Docker
Other Languages:	Python, C++, C#
Interests:	Basketball, Keyboards, Coffee
